

FEATURES

- ▶ Industrial Standard 2"x1" Package
- ▶ Ultra-wide Input Range 36-160VDC
- ▶ I/O Isolation 3000VAC with Reinforced Insulation
- ▶ Excellent Efficiency up to 90%
- ▶ Operating Ambient Temp. Range -40°C to +77.5°C
- ▶ No Min. Load Requirement
- ▶ Under-voltage, Overload/Voltage and Short Circuit Protection
- ▶ Remote On/Off Control, Output Voltage Trim
- ▶ Vibration and Shock/Bump Test EN 61373 Approved
- ▶ Cooling, Dry & Damp Heat Test IEC/EN 60068-2-1, 2, 30 Approved
- ▶ Railway EMC Standard EN 50121-3-2 Approved
- ▶ Railway Certified EN 50155 (IEC60571) Approved
- ▶ Fire Protection Test EN 45545-2 Approved
- ▶ UL/cUL/IEC/EN 62368-1 Safety Approval & CE Marking

NEW

PRODUCT OVERVIEW

The MINMAX MKZI40 series is a latest generation of 40 Watt railway certified and isolated DC-DC power modules with ultra-wide input range of 36-160Vin for railway DC system and 7 models available for 5/12/15/24/54/±12/±15VDC tightly output voltage within compact size 2"x1" size with shielded and encapsulated package which specifically design for railway/railroad, battery-powered and harsh environmental applications. Key performance featuring high I/O isolation 3000VAC with reinforced insulation, high efficiency up to 90%, operating ambient temp. range -40°C to +77.5°C, no min. load requirement, very low no-load power consumption, remote on/off, output voltage trim, build-in fault condition protection include under-voltage, overload, over-voltage and short circuit protection.

The MKZI40 series complies with railway certification EN 50155 (IEC 60571) which conform to vibration and shock/bump test EN 61373 approved, cooling/dry/damp heat test IEC/EN 60068-2-1,2,30 approved, railway EMC standard EN 50121-3-2 approved and fire protection test EN 45545-2 approved.

The MKZI40 series has been intensely qualified to safety approval UL/cUL/IEC/EN 62368-1 with CB report and CE marking which offer a solution for the applications where wide input voltage range, high efficiency for wide operating ambient temp. range, isolated power with high I/O isolation & insulation level, robust environmental & mechanical sustainability and even railway certification are required.

Model Selection Guide

Model Number	Input Voltage (Range)	Output Voltage	Output Power	Output Current	Input Current		Over Voltage Protection	Max. capacitive Load	Efficiency (typ.)
					@Max. Load	@No Load			
				Max.	mA(typ.)	mA(typ.)			@Max. Load
	VDC	VDC	W	mA			VDC	μF	%
MKZI40-110S05	110 (36 ~ 160)	5	40.00	8000	413	40	6.2	13600	88
MKZI40-110S12		12	39.96	3330	408		15	2400	89

MKZI40-110D12		±12	40.08	±1670	409		±15	1200#	89
MKZI40-110D15		±15	39.90	±1330	408		±18	750#	89

For each output

Input Specifications

Parameter	Model	Min.	Typ.	Max.	Unit
Input Surge Voltage (100ms. max)	All Models	-0.7	---	170	VDC
Start-Up Threshold Voltage		---	---	36	
Under Voltage Shutdown		30	33	35.5	
Start Up Time		---	30	--	mS
Input Filter		Internal Pi Type			

Remote On/Off Control

Parameter	Conditions	Min.	Typ.	Max.	Unit
Positive logic (Standard)	Converter On	3.5V ~ 12V or Open Circuit			
	Converter Off	0V ~ 1.2V or Short Circuit			
Negative logic (Option)	Converter On	0V ~ 1.2V or Short Circuit			
	Converter Off	3.5V ~ 12V or Open Circuit			
Control Input Current (on)	Vctrl = 5.0V	---	0.5	---	mA
Control Input Current (off)	Vctrl = 0V	---	-0.5	---	mA
Control Common	Referenced to Negative Input				
Standby Input Current	Nominal Vin	---	2.5	---	mA

Output Specifications

Output Specifications							
Parameter	Conditions		Min.	Typ.	Max.	Unit	
Output Voltage Setting Accuracy			---	---	±1.0	%Vnom.	
Output Voltage Balance	Dual Output, Balanced Loads		---	---	±2.0	%	
Line Regulation	Vin=Min. to Max. @ Full Load		---	---	±0.2	%	
Load Regulation	Io=0% to 100%	Single Output	---	---	±0.5	%	
		Dual Output	---	---	±1.0	%	
Minimum Load	No minimum Load Requirement						
Ripple & Noise	0-20 MHz Bandwidth	5Vo	Measured with a 1μF/100V MLCC	---	75	85	mV P-P
		12Vo, 15Vo, ±12Vo, ±15Vo		---	125	140	mV P-P
		24Vo		---	150	170	mV P-P
		54Vo		---	250	280	
Transient Recovery Time	25% Load Step Change (2)		---	250	---	μsec	
Transient Response Deviation			---	±3	±5	%	
Temperature Coefficient			---	---	±0.02	%/°C	
Trim Up / Down Range(7)	% of Nominal Output Voltage	Other Models	---	---	±10	%	
		54Vo Output	---	---	+5 / -15	%	
Over Load Protection	Hiccup		110	150	185	%	
Short Circuit Protection	Continuous, Automatic Recovery (Hiccup Mode 0.5Hz typ.)						

General Specifications

Parameter	Conditions	Min.	Typ.	Max.	Unit
I/O Isolation Voltage	Reinforced Insulation, Rated For 60 Seconds	3000	---	---	VAC
Isolation Voltage Input/Output to case	Rated For 60 Seconds	1500	---	---	VAC
I/O Isolation Resistance	500 VDC	1000	---	---	MΩ
I/O Isolation Capacitance	100kHz, 1V	---	1500	---	pF
Switching Frequency		220	265	310	kHz
MTBF(calculated)	MIL-HDBK-217F@25°C Full Load, Ground Benign	900,000	---	---	Hours
Safety Approval	UL/cUL 62368-1 recognition(UL certificate), IEC/EN 62368-1(CB-report), EN 50155, IEC 60571				

EMC Specifications

EMC Specifications				
Parameter		Standards & Level		Performance

Notes

- 1 Specifications typical at $T_a = +25^\circ\text{C}$, resistive load, nominal input voltage and rated output current unless otherwise noted.
- 2 Transient recovery time is measured to within 1% error band for a step change in output load of 75% to 100%.
- 3 We recommend to protect the converter by a slow blow fuse in the input supply line.
- 4 Other input and output voltage may be available, please contact MINMAX.
- 5 To meet EN 55032 Class A an external filter, please contact MINMAX.
- 6 To meet EN 61000-4-4 & EN 61000-4-5 an external capacitor across the input pins is required, please contact MINMAX.
- 7 Do not exceed maximum power specification when adjusting output voltage.
- 8 Specifications are subject to change without notice.

Physical Characteristics

Case Size	: 50.8x25.4x11.0 mm (2.0x1.0x0.43 inches)
Case Material	: Red Copper, Powder Coating
Base Material	: FR4 PCB (flammability to UL 94V-0 rated)
Insulated Frame Material	: Non-Conductive Black Plastic (flammability to UL 94V-0 rated)
Pin Material	: Copper Alloy with Tin Plate Over Nickel Subplate
Potting Material	: Epoxy (flammability to UL 94V-0 rated)
Weight	: 43.02g

External Output Trimming

Output can be externally trimmed by using the method shown below

Test Setup

Peak-to-Peak Output Noise Measurement Test

Use a 1 μ F ceramic capacitor and a 10 μ F tantalum capacitor. Scope measurement should be made by using a BNC socket, measurement bandwidth is 0-20 MHz. Position the load between 50 mm and 75 mm from the DC-DC Converter.

Technical Notes

Remote On/Off

Positive logic remote on/off turns the module on during a logic high voltage on the remote on/off pin, and off during a logic low. To turn the power module on and off, the user must supply a switch to control the voltage between the on/off terminal and the -Vin terminal. The switch can be an open collector or equivalent. A logic low is 0V to 1.2V. A logic high is 3.5V to 12V. The maximum sink current at the on/off terminal (Pin 3) during a logic low is -100 μ A.

Overload Protection

To provide hiccup mode protection in a fault (output overload) condition, the unit is equipped with internal current limiting circuitry and can endure overload for an unlimited duration.

Overvoltage Protection

The output overvoltage clamp consists of control circuitry, which is independent of the primary regulation loop, that monitors the voltage on the output terminals. The control loop of the clamp has a higher voltage set point than the primary loop. This provides a redundant voltage control that reduces the risk of output overvoltage. The OVP level can be found in the output data.

Input Source Impedance

The power module should be connected to a low ac-impedance input source. Highly inductive source impedances can affect the stability of the power module. In applications where power is supplied over long lines and output loading is high, it may be necessary to use a capacitor at the input to ensure startup. Capacitor mounted close to the power module helps ensure stability of the unit, it is recommended to use a good quality low Equivalent Series Resistance (ESR < 1.0 Ω at 100 kHz) capacitor of a 1 μ F for the 110V input devices.

Output Ripple Reduction

A good quality low ESR capacitor placed as close as practicable across the load will give the best ripple and noise performance. To reduce output ripple, it is recommended to use 1 μ F capacitors at the output.

Maximum Capacitive Load

The MKZI40 series has limitation of maximum connected capacitance at the output. The power module may be operated in current limiting mode during start-up, affecting the ramp-up and the startup time. The maximum capacitance can be found in the data sheet.

Thermal Considerations

Many conditions affect the thermal performance of the power module, such as orientation, airflow over the module and board spacing. To avoid exceeding the maximum temperature rating of the components inside the power module, the case temperature must be kept below 105°C. The derating curves are determined from measurements obtained in a test setup.
